simple_photo_joiner

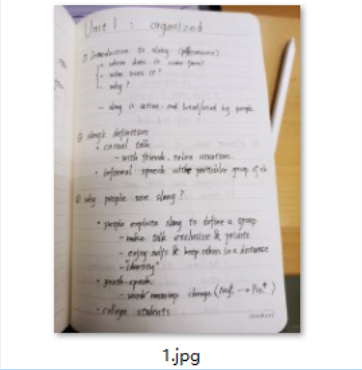
a simple tool to join some photos

How to use it

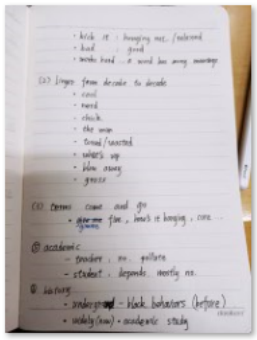
- clear folder `images`
- copy your own photos into folder `images`
- better make sure that **each photo are the same size** cause this is a very dummy joiner...
    - better make sure that **photos are arranged** well as you wish (You can just name them by numbers)
- run `joiner.py` or `joiner.exe` (may need to click `Enter` key in the process a few times)
- get `result.jpg` in the current folder, and enjoy :)

Demo

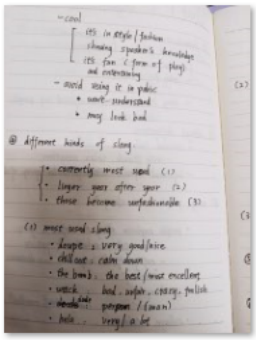
There are 3 jpg in `images` now: `1.jpg`, `2.jpg`, `3.jpg` currently.



1.jpg

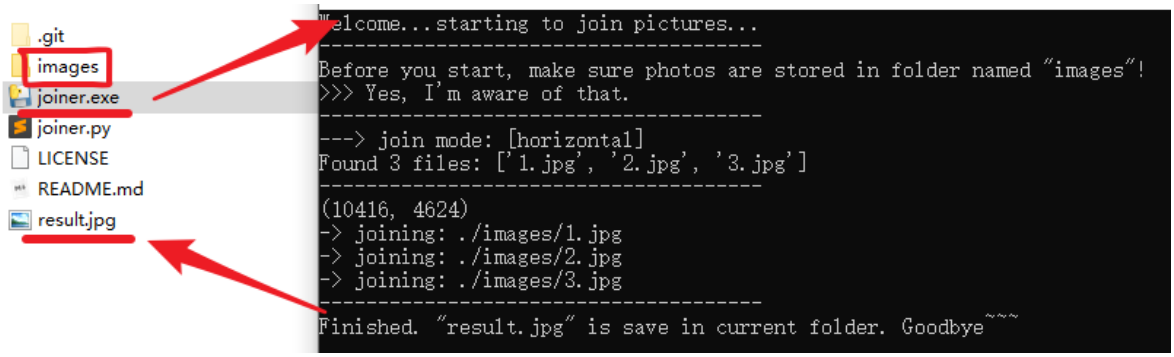


2.jpg

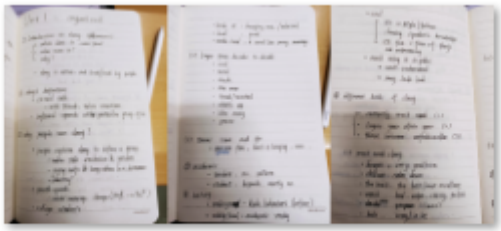


3.jpg

Let's try `joiner.exe`:



Now you get a joined photo `result.jpg`. Enjoy.



result.jpg
